

60V inverter voltage range

Overview

For a 60V inverter, typical minimum input voltages range between 40V to 48V, depending on design and load conditions. Exceeding this range risks: The push toward wide-voltage-input inverters has accelerated in 2024, driven by hybrid energy systems. If the minimum start up voltage of an inverter is 60v, which voltage of the solar panel do I look at the pmax, vmp or VOC to determine the minimum number of panels I need in series?

Edit: can I use a solar voltage booster like this to hit the minimum start up voltage of the inverter?
