

Are outdoor solar lights low voltage

Overview

The transformer converts the mains voltage of approximately 110 volts to a lower voltage ranging from 12 to 24 volts. However, their fundamental distinction lies in how they are powered and the ease of their installation. One system relies on the boundless energy of the sun, while the other connects. But with so many options for landscape lighting—specifically low voltage vs. solar—it can be tough to decide which is right for you. You may find yourself asking: “Which lighting option is more energy-efficient?”
