Overview

Photovoltaic (PV) systems convert sunlight into electricity, acting as power generators. Think of PV as a water pump and ESS as a reservoir – one creates resources, the other stores them. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. Together, these technologies are critical for clean energy solutions, they serve distinct roles in power generation and management. This guide breaks down their functions, applications, and why combining them creates smarter energy systems.
