Base Stations and Communication Towers

Overview

Base stations are an essential component of cellular networks, providing coverage and connectivity to mobile devices within a specific area or cell. The idea of base stations is anchored in their function to provide coverage, capacity, and connectivity, hence allowing for extending the working. Base stations and cell towers are critical components of cellular communication systems, serving as the infrastructure that supports seamless mobile connectivity. " A base station is called node B in 3G, eNB in LTE (4G), and gNB in 5G. You stay connected as you move between zones. Network reliability depends on proper.
