

Can artificial rainfall be generated by solar energy

Overview

The proposed artificial rain system is composed of solar-powered vapor generation equipment that floats on a large body of water. This vapor is transformed into clouds. These scientists have found a way to convert falling rain into renewable energy, and it's going to change everything. In the future, your roof could generate power not only from the sun but also from falling rain. “There is a large. Researchers created an elegantly simple device that uses the flow of water through tiny tubes to produce enough electricity to keep the lights on.

Artificial 'power plants' harness energy from wind and rain

Researchers developed literal 'power plants' -- tiny, leaf-shaped generators that create electricity from a blowing breeze or falling raindrops. The team tested the energy harvesters by

Can We Generate Electricity From Rainfall? » ScienceABC

In terms of the power being produced, raindrops will probably never be able to compete with a hydroelectric plant or solar cells. However, they do have one major advantage -- they're free.
