# **Can solar energy generate electricity after being covered**

## Overview

---

It turns out solar panels can generate power even when they're covered in snow. Off-grid rancher Jason (@HanbleceyaRanch) showed the proof in a short video. The setup in Maine was generating 113 watts when snow was still on the panels and about 410 watts once they were cleared. Solar photovoltaic (PV) panels convert sunlight directly into electricity. This is particularly relevant for homeowners and businesses in regions that experience winter weather, as it can influence energy production and overall system performance. Snow coverage on. This guide breaks down the science and steps behind solar power: how electricity is generated from solar energy, also captured, and converted into usable power, and how everyday families are turning roofs into mini power plants.
