# **Centralized Solar Power Plant Costs**

## Overview

---

The tables presented below are also published in the Electricity Market Module chapter of the U. Energy Information Administration's (EIA) Annual Energy Outlook 2022 (AEO2022) Assumptions document. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs. To accurately reflect the changing cost of new electric power generators in the Annual Energy Outlook 2025 (AEO2025), EIA commissioned Sargent & Lundy (S&L) to evaluate the overnight capital cost and performance characteristics for 19 electric generator types. This work has grown to include cost models for solar-plus-storage systems. Table 1 represents our assessment of the cost to develop and install various generating. Prices are compiled from three sources: Nemet (2009) for 1975-2003, Farmer & Lafond (2016) for 2004-2009, and IRENA for 2010 onward.
