Communication base station power supply field share

Overview

To address these challenges, a robust power supply scheme has been developed using Pulse Frequency Modulation (PFM), isolated AC-DC converters, and Zero Voltage Switching (ZVS) regulators. Communications infrastructure equipment employs a variety of power system components. By defining the term in this way, operators can focus on. In the communication power supply field, base station interruptions may occur due to sudden natural disasters or unstable power supplies. 9 V) at high current from compact. When natural disasters cut off power grids, when extreme weather threatens power supply safety, our communication backup power system with intelligent charge/discharge management and military-grade protection becomes the "second lifeline" for base station equipment. 45V output meets RRU equipment.
