

Development Zone Rural Solar Power Plant

Overview

While urban centers have dominated early clean energy adoption, rural communities across the U. are stepping into the spotlight in 2025. The new energy deployment programs offer funding and unprecedented incentives to expand new energy deployment, transforming rural. As shown in Map 1, roughly 18% of ground-mounted PV facilities in the U. were installed between 2021 and 2023, with a notable portion of these projects built on former cropland or pasture in rural areas. This trend has raised skepticism in rural communities, prompting questions about land value. Solar energy, which converts energy from the sun into thermal or electrical power, is rapidly expanding across America and the world.
