Do shopping malls need uninterruptible power supply

Overview

Malls often choose to support and protect their operations with standby generators and uninterruptible power supply (UPS) systems. Your shopping center relies on a consistent power supply to provide a safe, comfortable and seamless shopping environment for customers and retailers. Key Takeaways: Power outages can put a retailer's people, products, and partnerships at risk. Uninterrupted power can be supplied for lighting, card recognition, door lock systems, elevators, cash registers. However, without some means for shopping malls to provide back-up power when required, the customer experience might be a very different one, given the frequency of interruptions to the municipal supply, whether the result of storms, infrastructure failures, or planned outages.

Do shopping malls need uninterruptible power supply
