Does the home generator always run

Overview

When your power goes out, a whole-house generator can keep your home running smoothly until the grid is restored. Understanding these key elements of. Air-cooled home standby generators are designed to run for extended periods during power outages, requiring a shutdown and inspection after every 24 hours of continuous run time. They happen in the winter, of course, when high winds blow off the Pacific and down trees and power lines, but they also happen during fire season in the late. A few key factors determine how long your generator will keep your home powered. Natural gas, propane, and diesel all run differently.
