# **Electricity generation canada**

## Overview

---

In 2013, Canada generated 651.8 (TWh), a 10% increase since 2003. Approximately 822 generating stations are scattered from the Atlantic to the Pacific, for a nameplate capacity of 130,543 MW. They have a combined capacity of 100,829 MW. In comparison, the total of Canada was 111,000 MW in 2000.

### Electricity : Canadian Centre for Energy Information

Electricity information relative to generation, transmission, distribution and end use of electric power.

## Electricity sector in Canada

Only three provinces use coal for electricity generation. Saskatchewan, New Brunswick, and Nova Scotia rely on coal for less than half their generation while other provinces and territories burn none ...

## Electric power generation, monthly generation by type of electricity

Beginning in January 2016 reference month, the target population for the Monthly Electricity Supply and Disposition Survey has been expanded from 400 to 1,200 companies ...

## CER - Provincial and Territorial Energy Profiles - Canada

In 2021, Canada produced 625.7 terawatt-hours (TWh) of electricity. More than half of the electricity in Canada (60%) is generated from hydroelectricity.

The remainder is produced from sources including ...
