Overview

The Toolbox for Renewable Energy Project Development's Conducting Site and Economic Renewable Energy Project Feasibility Assessments page provides tools and resources to evaluate solar project feasibility and economics that influence project development. Technical feasibility extends beyond solar exposure: Modern feasibility studies evaluate structural integrity, grid interconnection capacity, shading patterns, and regulatory compliance – factors that can make or break a project regardless of how much sunlight a site receives. Financial modeling. Evaluating the site and economic feasibility of a solar project is an essential step in the development process and should be completed in the initial stages, prior to preparing a system design, entering into contracts, or purchasing equipment. In this article we propose a pre-feasibility study for the construction of the pla.
