## Overview

---

The grid-connected inverter plays a magical role in power conversion. Its PV capacity crossed 1,000 gigawatt (one, 1 TW) in May 2025. In 2024, China added 277 gigawatts (GW) of solar power, which was equivalent to 15% of the world's total cumulative. There are two types of inverters used in PV systems: microinverters and string inverters. In this section, we will explain each of them and their details. Solar panels lay flat on the ground.
