

# **Grid stabilization montenegro**

## Overview

---

Montenegro has taken a decisive step in its energy transition by adopting its National Energy and Climate Plan (NECP) and approving a new bill governing cross-border electricity and natural gas exchange. The Electricity Corridor is a flagship investment of the Economic and Investment Plan and the Connectivity Agenda. The EU, in partnership with financial institutions and beneficiary economies through the Western Balkans Investment Framework (WBIF), contributes to the establishment of a regional energy market. As Western Balkan energy systems modernize, Montenegro's grid and market position is becoming strategically important. These two documents form the backbone of the country's 2030 energy strategy and represent a significant milestone. SUBAGREEMENT NO. USEA/USAID -2022-714-01 This report is made possible by the support of the American people through the United States Agency for International Development (USAID). The increase in investments demonstrates greater ambitions year after year and that grid works are becoming more intensive and demanding, according to CEDIS.
