

# How many watts of solar power for tourism

## Overview

---

A good rule of thumb is 50-100 watts of solar capacity per person for casual camping use. Key factors to consider include the length of the trip, devices being powered and their energy needs, weather conditions, and backup power storage capacity. If you only remember one thing: solar “watts” is how fast you can refill your batteries, but your real target is your daily energy use (watt-hours per day). This guide shows a simple way to size panels that matches how RVs are actually used—weekend trips, boondocking, working remote, and yes, air. Solar panels are rated for their max efficiency—that is, a 100-watt solar panel will produce 100 watts in perfect conditions. ) The weather. Wattage refers to the amount of electrical power a solar panel can produce under standard test conditions (STC), which simulate a bright sunny day with optimal solar irradiance ( $1,000 \text{ W/m}^2$ ), a cell temperature of  $25^\circ\text{C}$ , and clean panels. It's a popular size for van conversions with bathroom, fridges, and fans.
