How tall is the power base station tower

Overview

The combination of antenna towers and associated electronic equipment is referred to as a “cellular or PCS cell site” or “base station. A transmission tower (also electricity pylon, hydro tower, or pylon) is a tall structure, usually a lattice or tubular tower made of steel, that is used to support an overhead power line. Transmission towers connect power plants to a series of substations, which allows one bulk power region of the grid to connect to another. It is also called a Electricity pylon. Utility poles.
