

# **How to fix the photovoltaic panel if it doesn't produce electricity**

## Overview

---

If your solar system is not generating enough electricity, it might be due to dirt, shade, or internal faults. Clean the panels regularly with water and a soft cloth. Ensure there are no nearby trees or buildings blocking sunlight. This guide will explore common reasons your solar panels may not be working and how to address them with the help of professionals like GC Solar & Electric. Below is a list of a few things to keep in mind while troubleshooting solar systems. Wear protective gear, such as non-slip shoes, goggles, a helmet, safety gloves, and other similar equipment. This guide. When solar panels cease to produce electricity, the primary steps include 1) assessing the components for visible damage or wear, 2) checking electrical connections for corrosion or loose fittings, 3) utilizing diagnostic tools to evaluate the system's performance, and 4) employing appropriate. Environmental factors cause 70% of solar production issues: Weather, shading, and dirt accumulation are the most common culprits behind reduced solar output, making regular monitoring and maintenance essential for optimal performance. 8% annually: Quality solar panels.
