How to install photovoltaic panel lifting

Overview

To lift solar panels onto your roof, you can use a ladder railing system, a pulley system, a lifting bag, or even DIY lifting systems using a pulley. Carrying them up the ladder can also be done with products like the solar panel caddy, and all of these ideas will make this task. The Fluke Module Lift™ is designed to safely and quickly transport a PV module to a roof, streamlining the installation process of solar panels. The system uses your existing Werner or Louisville fiberglass extension ladder. This tool changes the one job that every solar installer has come accustomed to as a necessary evil and that is the simple task of carrying the solar panels everywhere we go! I am going to assume that the majority of installers are not using forklifts or solar panel hoists to get solar panels.
