

Hungarian three-phase sine wave inverter

ESS

Overview

Rugged, heavy duty and industrial grade 3-phase pure sine wave DC/AC inverters, 24V, 48V, 125V or 250VDC inputs available. 208VAC or 380VAC or 415VAC output, 6000 watts. Pure sine wave output exactly duplicates mains power. The function of the inverter is to convert direct current to alternating current, so you can operate the devices even in the car and elsewhere. We distinguish between two types, modified. Similar to the MultiPlus, the Quattro is also a combined inverter and charger. Additionally it can accept two AC inputs and automatically connect to the active source. Its many features include a true sine wave inverter, adaptive charging, hybrid PowerAssist technology plus multiple system. This industrial inverter provides three phase, modified sine wave with single pulse per phase, pulse width modulated power which works well with three phase motors. Neutral point is grounded--Ultra quiet with no electrical interference. This inverter can be used for the following applications - Inverter for online applications with frequency locking with mains (inverter frequency locked with the mains frequency) so there will not be any.
