

Install photovoltaic panels in 2025

Overview

In 2025, the average cost for a residential system in the U.S. is 70¢ per watt, including installation. After applying the 30% federal tax credit, the cost can be reduced to 49¢ per watt. In 2025, solar panels are more efficient and affordable than ever for U.S. homeowners. The biggest wins come when you right-size your system. If you invest in renewable energy for your home such as solar, wind, geothermal, fuel cells or battery storage technology, you may qualify for an annual residential clean energy tax credit. The days of clunky, expensive solar are over. Prices stabilized in 2024-2025, and heading into 2026, we're seeing costs hold steady around \$2. As a solar shopper, one thing you need to realize is that the quoted price isn't what you'll actually pay. With improvements in technology, government incentives, and increased awareness of sustainability, switching to solar power is now a smart, cost-effective move.
