# Light rain solar power generation

**FLEXIBLE SETTING OF  
MULTIPLE WORKING MODES**

## Overview

---

There are technological breakthroughs that make it possible to harness rain to generate electricity—such as hybrid solar panels equipped with triboelectric nanogenerators or innovative systems like Pluvia. These innovations could complement solar energy and enhance its performance in rainy. Researchers created an elegantly simple device that uses the flow of water through tiny tubes to produce enough electricity to keep the lights on. Let the best of Anthropocene come to you. In the future, your roof could generate power not only from the sun but also from falling rain. Until now, scientists have been unable to get water droplets to produce a significant amount of power - but we may finally have a breakthrough. While we're still a long way. Rain itself does not harm solar panels—in fact, it can be beneficial.
