Outdoor installation of base station power supply equipment

Overview

Outdoor base stations integrate all essential systems into a single Integrated Cabinet, designed to endure harsh conditions like direct sunlight, rain, and extreme temperatures. These units protect the equipment while ensuring efficient functionality. Base offers two system configurations. The cabinet houses critical components like main base station equipment, transmission equipment, power supply systems, and battery banks. Meanwhile, the pole serves as a mounting point for antennas, Remote Radio Units (RRUs), and other equipment, often resembling a “candied hawthorn stick” in its. As 5G micro-base stations extend from cities to suburbs, rural areas, highways, wind and solar power stations, and even islands, these locations lack machine rooms, personnel, and have harsh environments. Traditional power solutions expose issues such as space occupation, complex interfaces, poor. ing narrower with height.
