

Photovoltaic bracket base fixing method

Overview

First, there are many fixing methods, such as pile foundation method (direct burial method), concrete block weight method, pre-embedded method, ground anchor method, etc. The choice of these methods depends on the specific conditions of the ground and the needs of the. The installation selection of photovoltaic ground brackets is mainly based on factors such as the fixing method of the bracket, terrain requirements, material selection, and the weather resistance, strength, and stiffness of the bracket. There are two types of solar panel mounts: ground and roof mounts. Common materials include aluminum alloy, carbon steel and stainless steel. In the specific installation process, it is necessary to choose the appropriate.
