# **Photovoltaic panel back sheet cracks**

## Overview

---

A common cause of cracks, breaks, and scratches in the backsheet is thermal or mechanical stress on the solar modules. RenewSys is the renewable energy arm of the ENPEE Group. All product images shown are for representative purposes only. This composite is usually laminated between a front glass and a backing sheet. I have several Solarex SXP-44 polycrystalline photovoltaic panels that are more than 20 years old and mounted at a 45 degree angle above a nearly horizontal roof meaning the rears of the panels are accessible and more exposed to the elements than panels mounted parallel and close to a roof. This article will guide you through the process of repairing cracked. A photovoltaic (PV) module, commonly known as a solar panel, is composed of multiple layers.

### How Do I Repair Cracks in the Back Sheet?

My thought is to paint the cracks from the rear of the panels with white spray paint and then cover them with aluminum tape. The sticky side of the tape is white, but I think it best to add an additional layer ...
