

# Price of all black solar panels

## Overview

---

Superior ROI Despite Premium Pricing: While all-black panels cost 10-20% more upfront, they deliver 6-7% property value increases and 20-25% higher efficiency rates, typically achieving payback periods of 6-10 years with 20+ years of additional energy savings. Market Dominance in 2025: Black solar panels now represent over 80% of new residential installations, with manufacturers having completely phased out blue polycrystalline panels as of 2023, making monocrystalline black panels the universal standard for homeowners. When we talk about black solar panels, we also mean the cell color. Having tested a few options myself, I can tell you that the feel of its tempered glass and aluminum frame hints at tough, all-weather performance. Thanks to their uniform coloring, they blend harmoniously. The Canadian Solar 395 watt monocrystalline perc all-black module is the best in terms of power output and long-term reliability at an attractive low price.
