# **Profit model of Chile s energy storage power station**

## Overview

---

With transmission lines at overcapacity and permitting delays slowing the development of new grid infrastructure, battery energy storage systems (BESS) have surged as a profitable alternative for Chilean power producers. Chile is rapidly moving to build more power generation capacity, with much of that effort focused on renewable energy resources and battery energy storage systems (BESS). Having energy storage in Chile is no longer a luxury asset but has become an “absolute necessity”, explains Alejandro McDonough, business development manager of Americas area sales at Wärtsilä Energy Services. The deployment of energy storage. Ensuring projects are paid for injecting power into the grid during peak periods has supported growth, and ambitious battery energy. Through strategic partnerships, Fluence has deployed multiple generations of its advanced Gridstack battery storage technology over more than a decade, across multiple projects in the country, delivering various benefits: 1. ENABLING RENEWABLE INTEGRATION The ability to store and dispatch large.
