# **Research on new energy storage channel strategy**

## Overview

---

This study proposes a shared energy storage strategy for renewable energy station clusters to address fossil fuel dependence and support the green energy transition. By leveraging the spatiotemporal complementarities of storage demands, the approach improves system performance and. Depends on both on Phase 2 and deployment of variable generation resources While the Phases are roughly sequential there is considerable overlap and uncertainty. Key Learning 1: Storage is poised for rapid growth. In today's markets the value proposition of energy storage systems is limited by high costs of deployment, technological constraints in power and energy capacity, and market rules and structures which silo the services energy. In the context of increasing renewable energy penetration, energy storage configuration plays a critical role in mitigating output volatility, enhancing absorption rates, and ensuring the stable operation of power systems.

**PRODUCT INFORMATION**

-  BATTERY CAPACITY  
50kWh~500kWh
-  DC VOLTAGE RANGE  
400V~1000V
-  DEGREE OF PROTECTION  
IP54
-  OPERATING TEMPERATURE RANGE  
-10~50°C
