# **SKYWORTH photovoltaic panels connected in series or in parallel**

## Overview

---

Connecting PV panels in series increases the voltage but amps remain the same, but in parallel connection, current and power output increase. Shading Performance Dramatically Differs: Parallel wiring maintains 83% efficiency with 25% panel shading, while series wiring drops to just 25% efficiency under the same conditions. This makes parallel configurations essential for installations with variable shading patterns like RVs or. When it comes to solar panel series vs parallel connections, installers face a choice similar to Volta's: maximize voltage or current?

This decision can significantly impact your solar array's performance and efficiency. You can do that one of two ways (or a hybrid of both). Finally, I'll discuss the pros.
