# Series lithium battery packs parallel charging

## Overview

---

Firstly, start by fully charging each 12V battery individually using a 12V charger. Next, connect the batteries in parallel—this means connecting the positive lead of one battery to the positive lead of the next and the negative lead to the negative lead. Figure 3 shows two 12-volt batteries connected in parallel. In fact, this is an absolute must. Whether you're designing an electric vehicle powertrain or optimizing a solar microgrid, our 15+ years of expertise in custom battery pack assembly will equip you to: Every custom. Proper parallel battery charging is crucial for maintaining the safety and efficiency of lithium battery packs.
