

Server racks for charging piles with AC DC integration

Overview

Specialty server racks with NEBS (Network Equipment-Building System) compliance and AC power integration are ruggedized infrastructure solutions designed for telecom and mission-critical environments. Movements at all levels in the data center. Open Compute Project (OCP)-inspired architectures, driven by Facebook and others, integrate the rack into the data center design in order to build one of the most efficient computing infrastructures from “grid to gates.” One element of this infrastructure. TDK-Lambda provides AC-DC Rack Mount Power Supplies that ranges from 800W up to 45000W of high useable power. These are versatile power solutions that can be mounted on 19" rack systems and comes with an array of features including built in ORing and hot swap, PMBus™ and LAN options for. Given rapid growth in the server and artificial intelligence (AI) markets, the amount of energy required per rack is increasing from 100kW to >1MW.
