

# Solar high temperature thermal power generation

## WORKING PRINCIPLE

## Overview

---

Concentrated Solar Power (CSP) technology uses lenses and mirrors to focus solar radiation onto a small area, generating high-temperature heat that can drive thermodynamic cycles for electricity production. THERMAL ABSORBER & OPTICAL CAVITY MODELING 3. OPTICAL CONCENTRATION Concentrated STEG demonstration will use NREL's high-flux solar furnace (HFSF) to achieve required levels of optical concentration. Baranowski et al, Energy & Environ. Sci 2012 Enabled. Solar thermal-electric power systems collect and concentrate sunlight to produce the high temperatures needed to generate electricity. The operating temperature reached using this concentration technique is above 500 degrees Celsius —this amount of energy heat transfer fluid to produce steam. SolarReserves Crescent Dunes CSP Project, near Tonopah, Nevada, has an electricity generating capacity of 110 MW. These specialized fluids are the “circulatory system” of modern power plants, particularly in.
