Overview

Most manufacturers recommend keeping holes within 6-8 inches (15-20 cm) from the center, but here's the twist: optimal distance varies like pizza toppings. Thin-film panels might tolerate 10-inch offsets, while heavy bifacial modules demand tighter 4-inch margins. Pre-drilled holes are typically found in the aluminum frames, allowing for secure attachment to mounting systems. Different mounting systems exist, including roof-mounted, ground-mounted. Most modern solar panels feature pre-drilled holes in their aluminum frames.
