## Overview

---

The number of solar cells in a panel directly impacts its voltage output. A 60-cell panel typically generates around 20 volts, while a 72-cell panel produces. Unfortunately, the answer is yes, solar panel voltage does fluctuate throughout the day. However, there are ways to manage these fluctuations through proper system design. Just as too much water pressure can burst a pipe, too much voltage can damage your power station. Here's what you need to know about voltage for solar panels: Open Circuit Voltage (Voc): This is the maximum voltage your panel can produce, usually measured on a bright, cold morning.
