**Solar panels generate
electricity in 6 years to pay for
themselves**

Overview

In the United States, home solar panels generally take between 7 to 10 years to pay for themselves in utility electricity costs avoided. This payback period depends on many factors, including local electricity rates, available incentives, and the total costs of the installation. 1 On average, residential solar installations in the U. Geographic location, government incentives and your household's electricity usage impact how quickly your solar investment will break even. What do you mean they'll pay for themselves?

How do you know that's true for my home?

What if I use more energy than other people?

Or have a larger system?

The question.

Solar panels generate electricity in 6 years to pay for themselves
