# **Solar photovoltaic panels are out of luck**

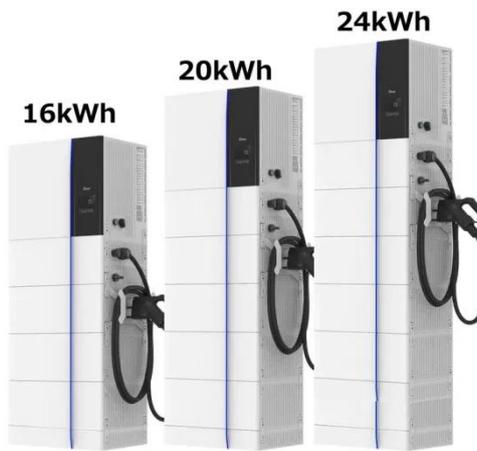

## Overview

---

After several years of 30 percent annual growth in installations, 2024 saw a decline: fewer panels were installed in many markets, and companies' valuations declined. A decade ago, someone knocking on your door to sell you solar panels would have been selling you solar panels. Mary Ann Jones, 83, didn't realize this had happened to her until she received a call last year from. The solar industry is chock full of contradictions right now. For all the good news -- big federal incentives and ever-increasing interest in renewable energy -- there's also been some not-so-great news, with some solar installers slashing jobs or closing down entirely. This led to large capital injections, major bankruptcies, and job losses. This was the second consecutive year of record-breaking capacity. The cons include high initial costs, specific roof requirements, possible higher property taxes and storage costs. Energy Information. To take it from recent headlines, it seems as though the global solar-power industry, following half a decade of record growth and governmental investment, flew just a bit too close to the sun. California, a longtime pioneer in solar development, has earned the most attention here: The tiny Golden.
