

Technical requirements for internal connection of battery cabinet

System Topology

Overview

Wire should be sized for a maximum voltage drop of 0. Operating Temperature: 20°C to 25°F (68°F to 77°F) recommended for optimum battery performance. A minimum of four inches is required in front and behind. System drawings and schematics are reviewed and clearly understood. If there are any questions concerning this manual or any of the installation or maintenance procedures and/or maintenance should always be performed with heavily insulated tools. This involves more than just connecting wires; it requires careful attention to ventilation and clearance. The BC-1(R) provides an internal terminal assembly for wiring the batteries to the fire. It is the duty of any such user to perform or have any professional expert of its choice (integrator, specifier or the like) perform the appropriate and comprehensive risk analysis, evaluation and testing of the products/solutions with respect to the relevant specific application or use thereof. Doors to battery rooms and battery cabinets.
