Tegucigalpa reduced carbon emissions

Overview

Honduras emitted 9,751 megatonnes of CO₂ in 2021, ranking it 77th in the world for CO₂ emissions. Owing to climate change, by 2050 the supply of water from Tegucigalpa's main river basins is expected to have reduced by 24%. Tegucigalpa faces significant challenges in combating urban poverty and climate vulnerability, with high population density and high levels of CO₂ emissions. The APCA project seeks to address these challenges through participatory methodologies and community collaboration to strengthen urban. TEGUCIGALPA, - Honduras has the potential to reduce poverty, lower inequality, and achieve low-carbon and climate-resilient development while accelerating climate adaptation, leveraging decarbonization policies, and transforming the agriculture, transport, and electricity sectors. steady growth in the last decade. In the NDC presented to the UNFCCC, the Government of Honduras (GoH) has pointed out the importance of the transport sector for the country's economy, so achieving its sustainability is one of the io help in fighting climate change. For this purpose, the project. 8), tropical storms alpha, beta and gamma (2005-2006) and more recently the impact followed in less than a week by Hurricane Eta and trop o ninth grade, with content on biodiversity and conservation of natural resources, risk management, including chemical risks, and intersectionally climate. In Honduras, road transport contributes with 43% of the GHG emissions produced by the energy sector, showing a steady growth in the last decade. The data shows that average emissions for a hotel in the city are 14.
