# **The latest energy station in China**

## Overview

---

China just fired up a next-gen battery hub blending lithium and sodium in its latest energy leap. On Sunday, its first lithium-sodium hybrid energy storage station began operation, marking a major step toward hybrid battery storage at scale. China has significantly increased its coal power capacity, reviving concerns about its climate-changing carbon emissions Headlines from ABC News Live Catch up on the developing stories making headlines. BEIJING -- Even as China's expansion of solar and wind power raced ahead in 2025, the Asian. A worker inspects facilities at a coal-fired power plant in Wuhan, central China. The plant's coal-fired Unit Nine has commenced operations after a 168-hour full-load trial. Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up. 4 million kilowatts is set to begin construction in June. Located in Southwest China's Yunnan Province, the Baochi.
