

The red and green lights of the solar inverter flash

Overview

The alternating red and green lights typically indicate a fault condition that the inverter has detected. This could be a result of ground fault detection, which occurs when the insulation resistance of the array falls below acceptable levels, potentially leading to unsafe. Your inverter has a switch and three colored LEDs that indicate system information, such as errors or performance. Any combination of LEDs on. If it red and not orange, then you may want to call your utility. It could be related to varying weather conditions, seasonal changes, or actual system faults like electrical issues, software glitches, or component malfunctions.

The red and green lights of the solar inverter flash

SolarEdge Inverter Flashing Green Light? (Here's why)

A blinking green light on your SolarEdge inverter usually means that it is initializing or searching for a grid connection. This is normal and should stop after a few minutes.
