Thermal energy storage slovakia

Overview

Slovakia is planning Europe's first grid-scale pumped thermal energy storage (PTES) project powered by the technology of our member Echogen Power Systems. The facility is expected to be operational by 2030. When there is surplus, Echogen and Westinghouse will aim to store surplus hydropower using supercritical CO₂, aiming to offer long-duration energy supply to Slovakia's grid. Echogen's PTES solution uses an electrically driven heat pump to convert electricity. While lithium-ion batteries dominate energy storage discussions, Echogen Power Systems is pioneering pumped thermal energy storage (PTES) technology. Their collaboration with Westinghouse Electric Company and Vodohospodárska Výstavba (VVB) marks a milestone - Europe's first grid-scale PTES facility.
