# **UK schools use network-connected communication power supply cabinets**

## Overview

---

As per the technical requirements outlined in the standards, educational institutions are mandated to equip their network switches with '2 power supplies', one of which must be a minimum of one UPS system (uninterruptible power supply). Make sure your school or college has proper network switches and switching infrastructure for reliability, security and resilience. This standard is one of the 6 core standards. However, many schools feel perplexed by the guidance and are in need of support to understand why the standards matter. This post is part of our series on the DfE's Technology Standards and covers the standards for networking cabling in schools and colleges.
