

# **VAT output for power storage projects**

## Overview

---

But when it comes to energy storage—a \$33 billion global industry generating 100 gigawatt-hours annually [1]—VAT (Value Added Tax) policies can make or break innovation. Imagine this: your solar-powered home battery could cost 20% less if lawmakers tweak a single tax clause. This Practice Note discusses changes to financing structures for battery storage projects after the enactment of the Inflation Reduction Act. Under the updated policy, rebates for certain lithium-ion. by an agency of the U. Government nor any agency thereof, nor any of their employees, makes any warranty, expressed or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness, of any information, apparatus, product, or. This report demonstrates what we can do with our industry partners to advance innovative long duration energy storage technologies that will shape our future—from batteries to hydrogen, supercapacitors, hydropower, and thermal energy.

## VAT output for power storage projects

---

### **Achieving the Promise of Low-Cost Long Duration Energy Storage**

LCOS is the average price a unit of energy output would need to be sold at to cover all project costs (e.g., taxes, financing, operations and maintenance, and the cost to charge the storage system).
