When will the money for photovoltaic panels be paid each month

Overview

Simply, you keep track of how much you save each month on electricity, and when these savings add up to what you paid for the solar panels, you've reached your payback period. After this point, any savings on your electricity bills are extra gains. The solar panel payback period typically ranges from six to 10 years, varying based on system size, location and incentives. Federal and local rebates, including a 30% federal tax credit, significantly lower initial solar installation costs. If you plan to finance solar panels, a solar loan calculator can estimate your monthly payments and rate to help you determine how much you can afford. Some shoppers break even in five years. Understanding what drives those differences helps you evaluate whether solar makes sense for your home—and which financing option gets you. Though solar is a big purchase up front, that investment quickly pays for itself in energy savings over the life of ownership.
