

# **Which is better for generating electricity solar energy or hydropower**

## Overview

---

In terms of efficiency, hydro power conversion is better – modern hydro turbines can convert over 90% of the water's energy into electricity. It is one of the oldest and most widely adopted forms of renewable energy, accounting for approximately 16% of global electricity generation, according to the International Energy Agency (IEA). In. Two major clean power sources that are super effective and sustainable are hydro power and solar power. Chariot Energy is happy to discuss these questions. We believe in educating people about the advantages that all green energy. Hydropower generates energy by harnessing the kinetic energy of moving water, typically from rivers or dams. While both of these technologies offer significant benefits to the environment compared to the burning of fossil fuels, such as coal or gas, each also comes with its own distinct set of advantages and potential.
