# Will solar power be available in a few years

## Overview

---

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U. Much of the utility-scale solar generation capacity additions will come. The Energy Information Administration, in its Short-Term Energy Outlook, is predicting a slowdown in the deployment of solar capacity in the United States, even before the Trump administration begins examining the technology's relative costs and benefits to U. 2024. Electricity generation by the U. electric power sector totaled about 4,260 billion kilowatthours (BkWh) in 2025. In our latest Short-Term Energy Outlook (STEO), we expect U. 6% in 2027, when it reaches an annual total of 4,423 BkWh. As costs decrease and efficiency increase, the future of the solar industry looks more hopeful than ever. This article explores the future of solar panels, key. You're probably aware that renewable energy is the future, but did you know that solar energy is set to lead the charge in the next few years?

According to the latest Short-Term Energy Outlook from the U. Just how high can that figure go?

The.
